The SDS-MAX four-spoke has a large carbide tip with two lateral auxiliary carbides that ensures low vibrations, optimization of drilling performance when it finds reinforced steel and longer life. The double helical winding achieves high dust removal, optimized drilling speed, less wear and lower temperature accumulation.

Advantages of drill head: Accurate point drilling due to built-in central drill. Faster drilling thanks to the quality of the carbides and the geometry of the cutting head. The extremely large spiral tubes result in a smooth transfer of dust during drilling.

The HSS-Co drill is a high-performance cobalt drill. Even with insufficient cooling, it has resistance to thermal resistance. Due to the addition of 5% Co alloy to the cutting material, these drills can be used to work on materials with a tensile strength of more than 800N / m². Suitable for cutting metals and stainless steels.

Designed for long life and high cutting efficiency. Always use the recommended operating speed, increase the speed slowly until a small cut is observed. When drilling in metals (except cast iron) always use cutting oil. Regularly remove the grout when cutting. The center drill should be approximately 3-4 mm above the saw teeth but not more than the thickness of the workpiece / Make sure that the hole saw is always perpendicular to the surface of the workpiece. Suitable for cutting metal, wood and plastic.
